

Additional Python Libraries

To successfully run scraping code, you need two more Python libraries: `html5lib` and `lxml`. Beautiful Soup uses both to parse HTML code. This will be important as you explore webpages to find and collect information.

Install Additional Python Libraries

In your terminal in your active coding environment, run the following commands:

NOTE

Some environments already have these libraries installed. If that's the case for you, move on to the next lesson.

```
pip install html5lib
pip install lxml
```
